

## 2007 CIGRE Canada Conference – Calgary, Alberta

### Table of Contents - Papers

- 406 – Optimised Compact SF6 Switchgear, Mobile Substations and Modules for Improved Substation Economics
- 407 – Hybrid Control for Fault Ride-Through Capability of a Wind Energy Conversion System
- 408 – Secure Substation Networks: Implement for Today; Design for Tomorrow
- 409 – Reducing the Adverse Impacts of Power Plant Cycling
- 410 - Current Transformer Verification System for In Situ, Live Line End-to-End Calibration of Medium and High Voltage Current Transformers
- 411 – New Network Concepts Using Fault Current Limiter Circuit Breakers
- 412 - Eco-friendly Compact Substation using Gas-insulated Technology
- 413 - Investing in Life-Cycle: A New Methodology
- 414 - Relay Protection and Substation Automation of Modern EHV Power Systems
- 417 – Impact of IEC 61850 on Substation Automation and Protection
- 418 - Relay Protection and Substation Automation of Modern EHV Power Systems
- 419 - Load-Shedding in Distribution Systems during Wide Area Disturbances
- 421 – Power Quality Improvement in Highly Varying Loads using Thyristor-switched Capacitor
- 422 - A Robust Power System State Estimator
- 423 - An Introduction to the Intelligrid Project
- 424 - Battery Storage System Modelling, Design and Operation for Wind Energy Integration in Power Systems
- 425 – Impact of Distributed Generation (DG) on Distribution Grids
- 426 - Tapchanger Controls—Use & Abuse in Volt/var Management (Line Drop Compensation Applications)
- 427 - Control Practices Contribute To Premature Transformer Failures
- 428 – Modeling Snow and Wind-on-Snow Loads in Southern Alberta
- 429 – Analysis of Snow and Wind-on-Snow Loads in Southern Alberta

430 - Blackout control: proposal of a preventive methodology and its implementation in the Portuguese Grid

431 - Supervisory Hybrid Control of a Wind Energy Conversion and Storage System

432 – Remote Supervision of GIS Monitoring System

433 – Production of Corrosive Sulphur Free Transformer Fluids

434 – Evaluation of Mercury Reduction in Sundance Unit 5

435 - Optimal Transposition Configuration of New HVAC Transmission lines in Multi-Circuit Corridors

436 - Use of Proven and Reliable Equipment and Technologies for Mitigating Transmission Congestion into Generation-Short Load Centers

437 - Thematic Maps for Transmission Line Asset Management

438 - Computer Assisted Design (CAD-3D)

439 - Comparison of Frequency-Based Positive Feedback Anti-Islanding Methods for Inverter-Based Distributed Generators

440 – Methods for Improving Power System Security by Certifying Dynamic Stability in Island Operation

441 – Distribution Automation and Graph Theory Applied to Fault Location and Power Restoration

442 - Joint Information Vibrant Active Network (JIVAN) to Avoid Future Blackouts

443 - An integrated planning, design and analysis environment for new embedded generation connections

444 – Monitoring Power Quality beyond EN 50160 and IEC 61000-4-30

445 - Challenges in Power Grid Integration

446 - Upgrading the Electrical Transmission Grid Using High Efficiency ACCC/TW Conductor

447 – Transformer Explosion and Fire Prevention Live Tests on Large Transformers: Analysis and Simulations

448 – Performance and Economic Evaluations of Air Quality Control Systems for Air Emissions Reduction in Coal Fired Power Plants

449 - Synchronous Generator Parameters Estimation Using Hybrid Genetic Algorithm

450 - Harnessing Kinetic Energy of Canadian Rivers: Opportunities and Challenges

451 – Assessment of Electrical and Mechanical Performance of Toughened Glass Insulators Removed from Existing HV Lines

452 - Transmission Line Optimization for the 500kV Genesee – Langdon Project

453 - Validation of a Two-Time Step HVDC Converter and Cable Stability Model

454 - Risk Management Techniques for Engineering and Craft Resources during a Renaissance in Transmission System Development

455 - Innovative Strategies to Address Human Resource Demands for Graduate Engineers in the 21st Century Canadian Power Sector

456 – Over Voltages at the Terminal of a Wind Farm Connected to a Coupled Double Circuit Transmission Line in Ontario

457 - From Centralized Hydro-thermal to Decentralized Renewable - The Austrian Challenge

458 - ADRES - Autonomous Decentralized Regenerative Energy Systems

459 - Asset Management Trends and Challenges

460 - Serial vs. IP in Control Systems: A Collision of Technologies – The Perspective from 40,000 Feet

461 - Evaluating the Merchant Transmission Market

462 - Investigation of a Criterion for Load Shedding Based on Voltage Stability Indices

463 - Simulating Wind Power Impacts on System Operation

464 - New approaches in Switchgear Technology and Substation Layout

465 - Implementing NERC CIP Compliance with Automated Tools

466 - SVC PSCAD Model Validation Testing in Manitoba

467 - Engineered Wood Structures for Electric Utility and Telecommunication Applications

468 – Increasing Transmission Capacity – Case Studies and Techniques

469 - Developing a Comprehensive Substation Cyber Security and Data Management Solution

471 - Wind Energy Considerations in Generating Capacity Adequacy Assessment

473 - Cyber Security Issues, Challenges and Solutions for the Emerging Smart Grid

474 - IEC 61850 Substation LAN - Issues to Consider when Designing and Deploying the Ethernet Network

475 - Quantifying the Vulnerability of a Power Grid to Cascading Outages

481 – Data Issues for Practical Asset Management
