

## 2008 CIGRE Canada Conference – Winnipeg, Manitoba

### Table of Contents - Papers

- 485 – TCSC Impedance Regulator Applied to the Second Benchmark Model
- 486 – Stand-alone Operation of an Electronically-Coupled Distributed Generation Unit under Unbalanced Conditions
- 487 – Operating Reserve Assessment of Wind Integrated Power Systems
- 488 – Research on Treeing Retardant Performance of XLPE Material Used for Medium Voltage Power Cables
- 489 - A Real-Time Voltage Security Assessment System (VSAS) at Albert
- 492 – Planning Tool for Estimating Transient Over Voltages on Multi-infeed HVdc invertersa Electric System Operator
- 493 - The Migration of Serial to Ethernet Communications – Why bother?
- 495 - Rational Design Equations for the Aeolian Vibration of Overhead Power Lines
- 496 - Assessment of Remedial Control Schemes for Damping Transient Oscillations in the Mexican System
- 497 - Eco-friendly Substation using Gas-insulated Technology
- 498 - Issues Affecting the Electricity Transmission System in Mexico under a Competitive Integrated Model
- 499 - A Power-Line-Signaling-Based Scheme for Islanding Detection of Distributed Generators
- 502 – Ingledow 500 kV Substation - Using Mixed Technology Switchgear Solutions for Replacement
- 503 - A Fiber Optic Hybrid Multifunctional AC Voltage Sensor
- 504 - Standard IEC 61850 Substation Automation
- 505 – Migration of the TLC Systems for the Management of the Electric Networks towards TCP/IP Solutions
- 506 - Transformer Inrush Current Reduction through Sequential Energization for Wind Farm Applications
- 507 - Evaluating Conversion of AC Power Transmission Lines to DC
- 508 - Advances in 3D Substation Design at Hydro-Québec

- 509 - Eskom Distribution process and challenges for the connection of embedded generation
- 510 - Evaluation of Wind Capacity Credit Considering Key System Parameters
- 511 - Generating System Adequacy Evaluation Considering Wind and Storage Operating Strategies
- 512 - Compact AIS Substations with high availability
- 513 - Protection of Oil-Filled Transformer against Explosion
- 515 - Use of Shunts for Repair and Upgrading of Compression Splices and Dead-ends
- 516 - Nowcasting Wind Power for Grid Operation at RWE Transportnetz Strom GmbH (RWE TSO)
- 517 - Early Warning Vision Based Ice Detection System for AC Ice Melting Program
- 518 - Addressing Professional Resource Challenges Facing Modern Utilities with Technological Solutions
- 519 - Low Power Consuming MEM Sensors for Power Engineering Applications
- 520 - Modular and Extensible Systemic Simulation of Demand Response Networks
- 521 - Manitoba Hydro Wind Power Reserve Requirements
- 522 - Implementation of a Decision Support System for Optimal Planning of Transmission Lines De-Icing Strategies during Ice Storms
- 523 - Implementation of CIM-based Enterprise Architecture and Integration bus for Centralized Transmission Operations Data
- 524 - Phasor Measurement Unit (PMU) Communication Experience in a Utility Environment
- 525 - A Novel Artificial Neural Networks Based Distance Relaying Scheme for Series Compensated Transmission Lines
- 526 - Assuring Distribution Cable System Reliability
- 527 - Performance Assessment of Commercial Relays for Anti-Islanding Protection of Rotating Machine Based Distributed Generation
- 528 - Solar Photovoltaic Markets, Economics, Technology, and Potential
- 530 - A Hardware-In-the-Loop Simulation Platform for Prototyping and Testing of Wind Generator Controllers
- 531 - Optimal Placement of PMUs in a Wide Area Monitoring System Using an Artificial Neural Network Based Technique
- 532 - Assembly of High Voltage Devices
- 534 - An Overview of Wind Power Growth and Technology Developments for Wind Power

535 - The Changing Utility Workforce and the Evolution of Utility Design

537 - Electrified Rail Passenger Transport Options

538 - Electric and Hybrid Passenger Vehicles

539 – Challenges and Benefits of Integrated Over-head Line Inspections

540 - An Improved Distance Protective Relaying Technique for Transmission Lines

541 - Bidirectional Battery Chargers for Plug-In Hybrid Electric Vehicles

542 - Marine Energy Development and Grid Integration in Canada

543 - The Myth and Realities of Renewable Energy

544 - Impact Assessment of Distributed Generation on Medium Voltage Distribution Systems of Hydro One Networks Inc.

548 - EMTP-Based Ferro Resonance Analysis for a Refurbished Generating Station

549 - Current Issues and Strategies for Transmission Planning

550 - Electricity Plan and Outlook for Ontario

551 - Aged Porcelain and Toughened Glass Insulator Integrity Assessment

552 - Manitoba Hydro Long-Term High-Voltage Transmission Line Magnetic Field Monitoring Project

553 - Cost Benefit Analysis of High Surge Impedance Loading (HSIL) HVAC Transmission Lines

554 - A Roadmap for Evaluating the Undergraduate Power Systems Curriculum

555 - Impacts of Climate Change on the Planning, Operation and Asset Management of High Voltage Transmission Systems

557 - AC to DC Conversion: Recent Experience and Developments in ESKOM

559 - A Method of Accurate Determination of Voltage Stability Margin

561- Manitoba Hydro's Aboriginal Partnerships: A New Business Model for Developing Current and Future Hydroelectric Projects

562 – The Future of Substation Automation (Protection, Control, System)

563 – Adaptive Protection of Transmission Lines

564 - IEC61850 Based Refurbishment Strategies for Protection and Automation Systems

565 – Increasing Protection & Control Integration

566 – Advanced High-speed Protection for Transmission Lines with Different Configurations

567 - Novel Locational Reliability Indices and Their Applications in Competitive Electricity Markets

568 - Dead Tank based Compact Switchgear – Optimized High Voltage Substation Equipment for 145 kV
