

2010 CIGRE Canada Conference – Vancouver, British Columbia

Table of Contents - Papers

- 101 – Probabilistic Transmission Planning Method at BCTC and a Case Study
- 103 – The Integrated Power Grid
- 104 – Sustainable Energy from Biomass: A Case Study
- 105 – Updated Langdon SVC Model in PSSE
- 106 - The Changing Utility Workforce and the emergence of Building Information Modeling in Utilities
- 107 – Fault Location in Extra Long HVDC Transmission Lines using Discrete Wavelet Transform
- 108 - Hydro-Québec TransÉnergie Imagine Project – Application to Transformer Monitoring
- 109 - Power Quality Enhancements for IEC 61850
- 110 - On the Specification of Bus Voltages and Radial Link Transfer Impedance Modes
- 112 - Real-Time Simulation of a 180-cell 720-switch Modular Multilevel Converter for HVDC Transmission Studies
- 113 - Using Smart Meter to Monitor the Energy Consumptions of Home Appliances
- 114 - Online Tracking of Voltage-Dependent Load Model Parameters
- 115 - Switchgear Condition Monitoring
- 116 - Fuzzy Probabilistic Approach for Overhead Shield Wires Assessment and Replacement
- 117 - Fault-Induced Conductor Motions on Distribution Lines
- 119 - Rejuvenation of Insulation in Aged Power Cables
- 120 - Direct Switching Control of DC-DC Power Electronic Converters Using Hybrid System Theory
- 121 - Finding a Single Point of Truth
- 123 - Field Trial of Dynamic Thermal Rating Devices on 230 kV Indian Arm Crossing in British Columbia
- 125 - Automation of Substation Design
- 126 - Applying Meteorological Data to Power System Planning, Operation, and Maintenance
- 127 - A New Method to Prevent Maloperation of Zone 3 Relay Due to Overload

- 128 - Integration of Compressed Air Energy Storage with Wind Power
- 129 - Detection, Location, and Classification of Downed Conductors in Series-Compensated Transmission Lines
- 130 - Substation to substation (ss2ss) GOOSE exchange for critical relay operations
- 131 - Distributed Stability Control Using Intelligent Voltage-Margin Relay
- 132 - Performance Evaluation of Accelerated Protection for Microgrids
- 134 - Composite System Reliability Assessment Using Intelligent Contingency Selection
- 135 – Fluid Structure Interaction Methods in Prevention of Transformer Explosion
- 136 - Low Cost Feeder Monitoring Solution in Support of Utility Operations
- 137 - Improving IEC 61850 Interoperability: Experiences and Recommendations
- 141 - Futuristic Crystalline Electricity – Generation and its Application in Railway Stations
- 142 - Advantages of Airborne Lidar Technology in Power Line Asset Management
- 143 - Review of Grid Code Frequency Requirements for Wind Farms
- 144 - Cable Rejuvenation Mechanisms: An Update
- 145 - New Development in Relay Protection for Smart Grid: New Principles of Fault Distinction
- 146 - Smart Grid 3.0 – A Grid Ready Approach
- 147 - New Technologies for Load Research at BC Hydro
- 148 - Load Analyzer – a Software Tool for Load Data Analysis
- 149 - New Design for Energy Recovery by the Development and Application of Absorption Chiller at Mae Moh Power Plant
- 151 - Performance Improvement on Mae Moh Coal-fired Power Plants
- 153 - Accelerating Experience – Utility Sector Case Studies in Training and Knowledge Management
- 154 – Fault Locator Based on Line Current Differential Relay Synchronized Measurements
- 155 - Intelligent Power System Data Management Systems (DBMS)
- 156 - Smart Grids – A Network Perspective on Renewable Integration and Self-healing Networks
- 157 - Fault Location Detection on Tapped Transmission Lines
