

## 2013 CIGRE Canada Conference – Calgary, Alberta

### Table of Contents - Papers

208 - Leveraging Graphical System Design, Reconfigurable Hardware, and Knowledge Management to Develop an Advanced Asset Monitoring System for Large Hydro Generator

213 - Non-invasive acoustic testing and monitoring of power transformers

215 - Feeder Differential Protection over EPON for Smart Distribution Networks

218 – Does  $1 + 1 = \text{Redundancy?}$

221 - Building a HVDC Bipole Scheme from one LCC Pole and one VSC Pole

225 - Impact of transmission line transpositions on negative sequence voltage unbalance

226 - An Ethernet Multiplexer for Protection and Control A CFE Case Study

229 - The Service Reliability of Aging Power Transformers

231 - World's First Deployment of Line Current Differential Protection (LCDP) Using Broadband Power Line Carrier (B-PLC) Technology

234 - Locating Oil Leaks in the Submarine Power Cable Crossing the Northumberland Strait

235 - A Real Time Environment for Closed-Loop Testing of PMU-based WACS Schemes

237 – Prioritizing Maintenance for Protection Assets (PA): Utilizing Decision Indices

238 – Utilization of Histogram in Control of Aggregated Loads with Innate Storage

239 – Advanced Tap Changer Control of Parallel Transformers based on IEC 61850 GOOSE Service

240 - Harmonics from Home Appliances

241 - Development of Fibre Reinforced Polymer Composite Cross Arms for Sustaining Transmission Lines

242 - Clarifying the Impact of Meshed Conductors and Additional Grounding on Creating an Equipotential Zone

245 - Pipe-type cable failure Caused by Lightning & Water Induced Sand Blasting

249 - Electromagnetic Transient Overvoltage Study of a Multi-Terminal VSC based HVDC System

253 - Second Generation Computerized Maintenance Management Systems: A Critical Asset Management Tool

254 – Planning for a New 500 kV Substation in Manitoba

255 - AmpaCity Project – Advanced Superconducting 10 kV System Replaces Conventional 110 kV Cable System in City Center

256 - Protection Challenges and Solutions for Lines with Multiple Taps

265 - An Ultra-fast Disconnecting Switch for a Hybrid HVDC Breaker – a technical breakthrough

266 - Converter Technologies and Functional Requirements for Reliable and Economical HVDC Grid Design

267 - SVC Design and Installation for Voltage Stability Enhancement

271 - An On-line Distributed Slack Bus Model for the Interconnection of Alberta Power Grid and WECC

273 – Planning for the Integration of HVDC Facilities

274 – Estimating Ground Clearance Required for Induction on Vehicles

277 – Design Aspects of the Eastern Alberta Transmission Line HVDC Project

283 – Using IEC61400-25 and IEC 61131 to Process Wind Farm Data

284 – Integrated Tool for Static and Dynamic Security Assessment of Large Power Systems

289 – Performance evaluation and simulation of WiMAX capacity for distribution automation

294 – Paradigm shift required to Digitize modern grid

296 – Self-healing of Power Distribution Networks: Techniques and Deployment Challenges

306 - Comprehensive Functional Testing of a Synchro Phasor Data Concentrator

307 - Reliable Network Design and Architectures for Modern P&C Systems

308 - Assessment of HVDC Transmission Line Transposition on Induction Issues due to AC/DC Lines Coupling in Common Transmission Corridors

310 - IEC61850-9-2 Process Bus Implementation on IEDs

312 - A Program for Automation of the Harmonic Impedance Calculations Required for the Specification of HVDC Links

314 - Cognitive Radio for Smart Grid

316 – Resistive superconductor fault current limiter design and application for extending critical asset life

318 – Single-pole trip and reclose practical considerations and industry practise

319 - New Technological Approach to Simplify Pole Loading and CSA Structural Analysis Requirements

321 - Multi-Function High-Voltage Sensors – Key to Enhanced Power System Operation and Automation – a Technology Adoption Roadmap

325 - Remedial Action Scheme Philosophies and Montana-Alberta Tie-Line

331 - Big Data = Big Challenges for Big Substations and Big Assets

332 - Substation Control and HMI at BC Hydro – Past, Present and Future

333 - Non-Linear Finite-Element Analysis of Conductor Cables with Composite Core Mechanical Behavior

337 - Methods for Risk Assessment of SSCI Stability Issues between Renewable Generation and Series Compensated Transmission Systems

338 - A study on effect of CT saturation on Low power CT/VT operated digital overcurrent relays

340 - Simplifying Protection System Design for Distribution Substations

341 - Lessons Learned: Implementing an IEC 61850 Based Substation Automation System

344 - Version Control and Patch Management of Protection and Automation Systems
